L15: Entry 5 of 16   File: PGPB   Jan 30, 2003

DOCUMENT-IDENTIFIER: US 20030023473 A1
TITLE: METHOD AND ARTICLE OF MANUFACTURE FOR PROVIDING A COMPONENT BASED INTERFACE
TO HANDLE TASKS DURING CLAIM PROCESSING

Detail Description Paragraph:
[1026] T_Long_Desc: A full-length textual description of C_Code--what the user will
actually see (e.g., Close Supplement--Recovery, File Note, Workers Compensation)

Detail Description Paragraph:
[1464] After the claim level, all claimants are listed with their associated lines
in a hierarchy format. When a claimant is added, a node is added to the tree, and
the field identifying the claimant is listed as "Unknown". Once a participant has
been identified, partial or client, the name of the claimant is listed on the
level.

Detail Description Paragraph:
[1596] Injury is an aspect of participant information, which is related to the
claimant participants on the claim. The participant component relates clients to
all other claim-related entities. Information on injuries will be related to
participant records and displayed at the participant level information in the Claim
Folder. New entities are needed to implement injury data capture: injury and ICD-9
search. The Injury component interacts with five other components: Claim Folder-
which contains Disability Management data about a claimant; Participant-which lists
the individuals associated with the claim; as well as File Notes, Task Assistant
and the Event Processor. The injury component also uses Microsoft WORD to create a
formatted, historical injury report for a particular individual.
